

PICTURE DISPLAY TOOTHBRUSH

Abstract of Disclosure

A toothbrush is provided that includes a toothbrush body having a toothbrush handle and a brush head. A display window is selectively attachable to and detachable from the toothbrush body. A photograph can be placed behind the translucent display window to cover, and yet provide visual access to, the photograph. Different photographs can be chosen for different toothbrushes such that each toothbrush is customized for a particular user. This provides for easy identification of different toothbrushes, and provides each user with a uniquely customized toothbrush.
